 All GALFER products (discs, pads and brake lines) are designed and manufactured in our 6000 sq. meters factory at Granollers (Barcelona), next to the Circuit de Catalunya.

The production process begins in the R&D Department, responsible for launching new products. The materials are developed in our laboratories and then chemical and physical tests are conducted. Once this phase is completed and to determine their going into production further tests are conducted on a vehicle. The Department of Methodology designs the production processes with the Engineering Department. Finally, the Quality Department certifies the quality and reliability of our products according to ISO standards.

We are members of the FEMFM (Federation of European Manufacturers of Friction Materials), and we have worked together for the European Quality Manual of disk pads, drum brake calipers and clutches.

 Todos los productos GALFER (discos, pastillas y latiguillos de freno) se diseñan y se producen en la fábrica de Granollers (Barcelona), unas instalaciones de 6000 m2 situadas al lado del Circuit de Catalunya.

El proceso productivo se inicia en el Departamento de I+D+i, que se encarga del lanzamiento de nuevos productos. Nuestros laboratorios desarrollan los materiales y los someten a pruebas químicas y físicas. Superada esta fase, se realizan las pruebas sobre el vehículo para determinar el paso a producción. El Departamento de Metodología diseña los procesos productivos en conjunción con el Departamento de Ingeniería. En último lugar interviene el Departamento de Control de Calidad, que certifica la calidad y fiabilidad de nuestros productos siguiendo las normas ISO.

Somos miembros de la FEMFM (Federation of European Manufacturers of Friction Materials), con la que hemos colaborado en la elaboración del Manual de Calidad europeo para pastillas de frenos de disco, mordazas de freno de tambor y embragues.

Il processo produttivo ha inizio nel reparto di R+S+i, responsabile del lancio di nuovi prodotti. I nostri laboratori sviluppano quindi i materiali e li sottopongono a test chimici e fisici. Superata questa fase, si eseguono prove sul veicolo per determinare se il prodotto possa entrare nella fase di produzione. Il reparto di metodologia sviluppa i processi produttivi in collaborazione con il reparto ingegneria e, infine, interviene il reparto di Controllo qualità, che certifica, appunto, la qualità e l'affidabilità dei nostri prodotti conformemente alle norme ISO.

Siamo membri della FEMFM (Federation of European Manufacturers of Friction Materials), con cui abbiamo collaborato alla redazione del Manuale di qualità europeo delle pastiglie per freni a disco, ganasce per freni a tamburo e frizioni.

 Les durites métalliques FK Galfer améliorent de plus de 30% la performance du freinage car elles offrent un coefficient de dilatation beaucoup plus faible que les durites classiques. Elles sont fabriquées à partir de matériaux d'excellente qualité: enveloppe extérieure en acier inox tressé recouvert de PVC.

Caractéristiques principales:

- Améliore le feeling au levier, freinage constant et précis.
- Connexion directe au maître-cylindre de frein.
- Augmente la réactivité.
- Ne s'oxydent pas et résistent à des températures élevées.
- Kits complets de Frein et embrayage avec 1, 2 ou 3 durites suivant la spécificité de chaque moto (les durites pour motos « off road » incluent une gaine de protection).
- Raccords de connexion réutilisables pouvant être fournis séparément.
- Gains disponibles en 4 couleurs (transparente, noir, rouge e carbon) et qualité laiton argent raccords.

3 HOMOGENEOUS BRAKE PADS WEAR

The same contact surface between pad and disc during each turn generates a regular wear out of the brake pads and an homogeneous pressure.

4 DYNAMIC UNBALANCE DECREASE

Having less unsprung mass reduces the gyroscopic effect and improves the maneuverability of the motorcycle.

5 STATE OF THE ART TECHNOLOGY

The CUBIQ brake track design is inspired in the latest modern designs and in contemporary elements.

6 NAMED AFTER THE STEEL MOLECULES

The origin of the CUBIQ name comes from the crystal molecules of the steel.
